Supply Chain Management – a defintion

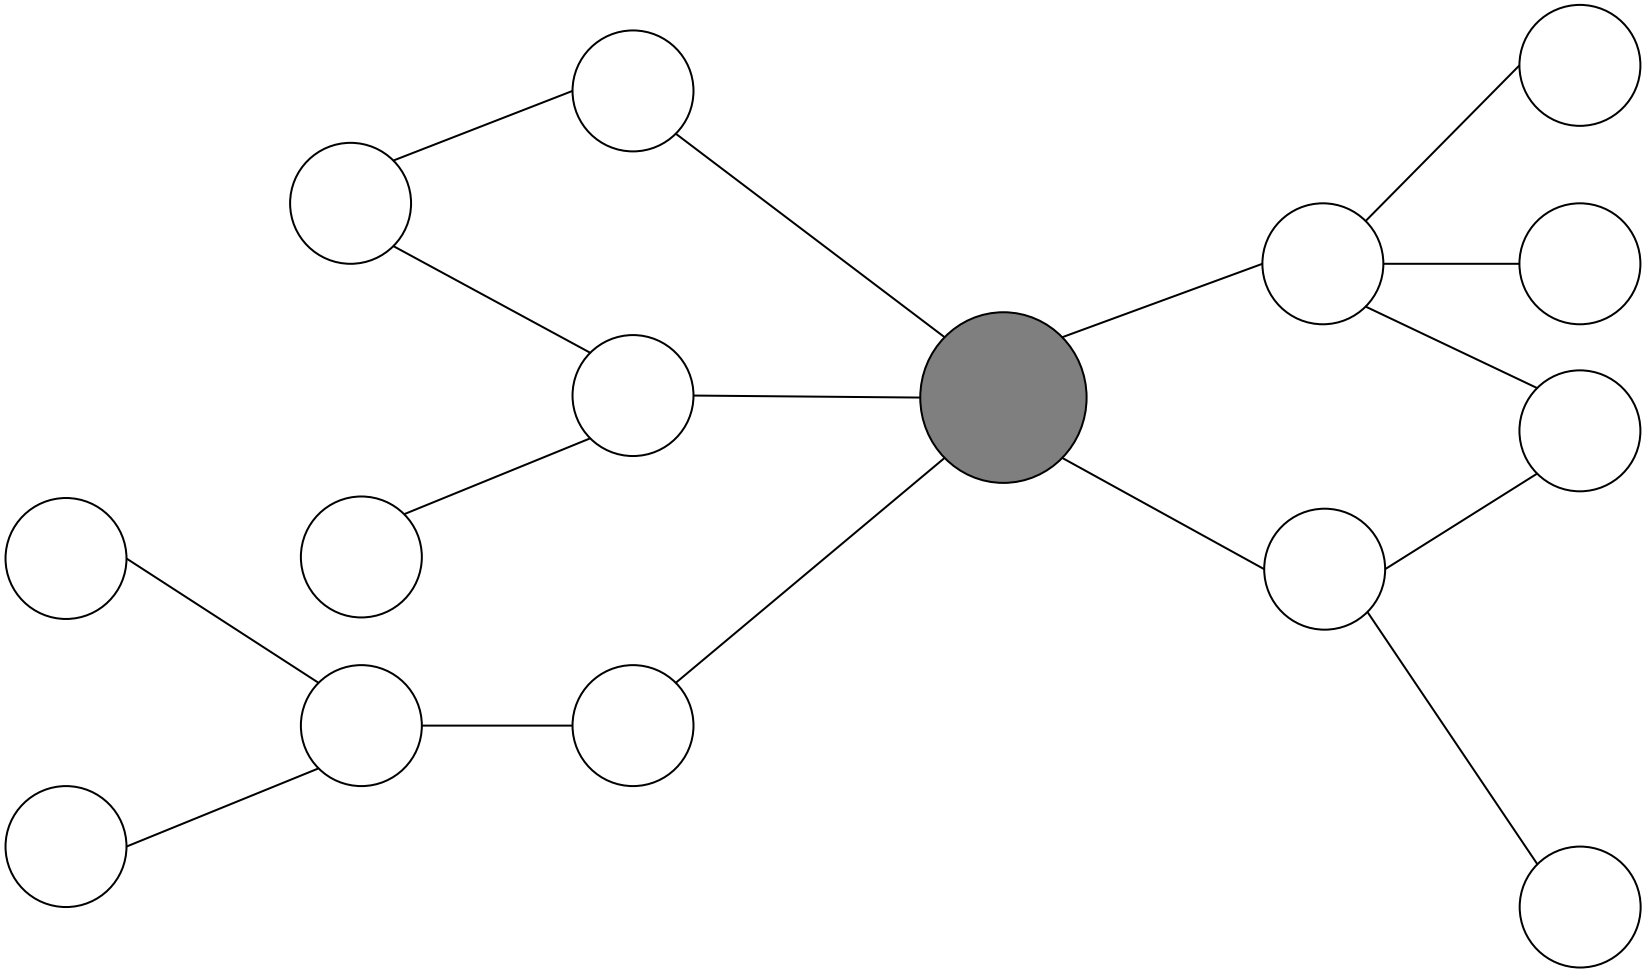

The management of upstream and downstream relationships with suppliers and customers in order to deliver superior customer value at less cost to the supply chain as a whole. (Martin Christoper, 2011)

Supply Chain Management – as a metafore

No chain is stronger than its weakest link.

Who decides the strength?

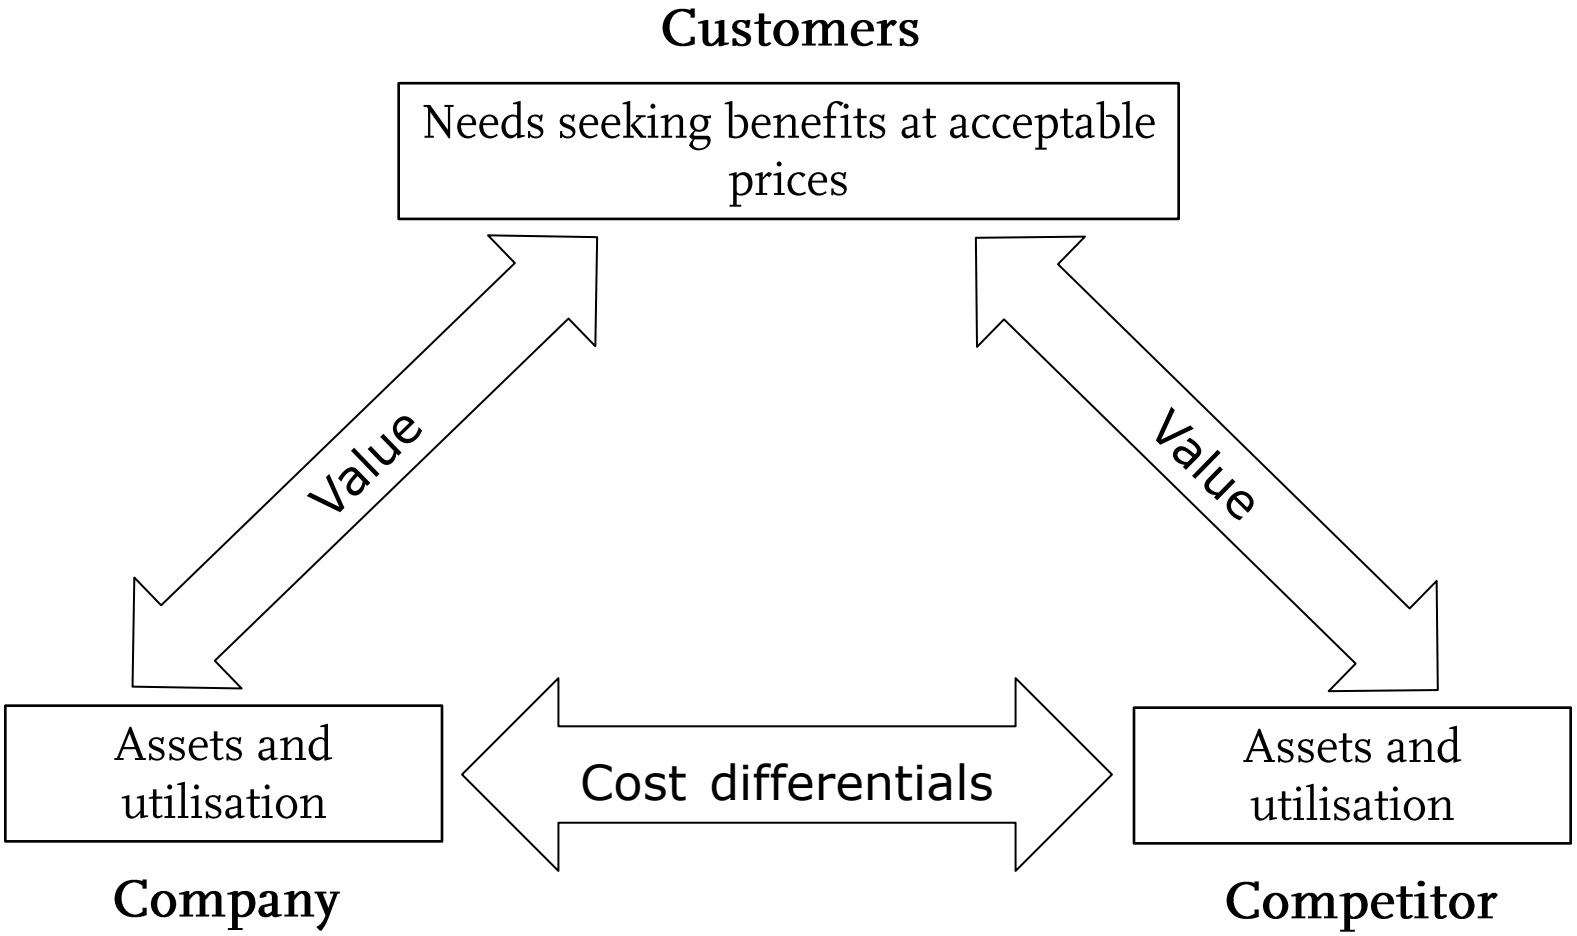

The supply chain network

Strategy – three important questions

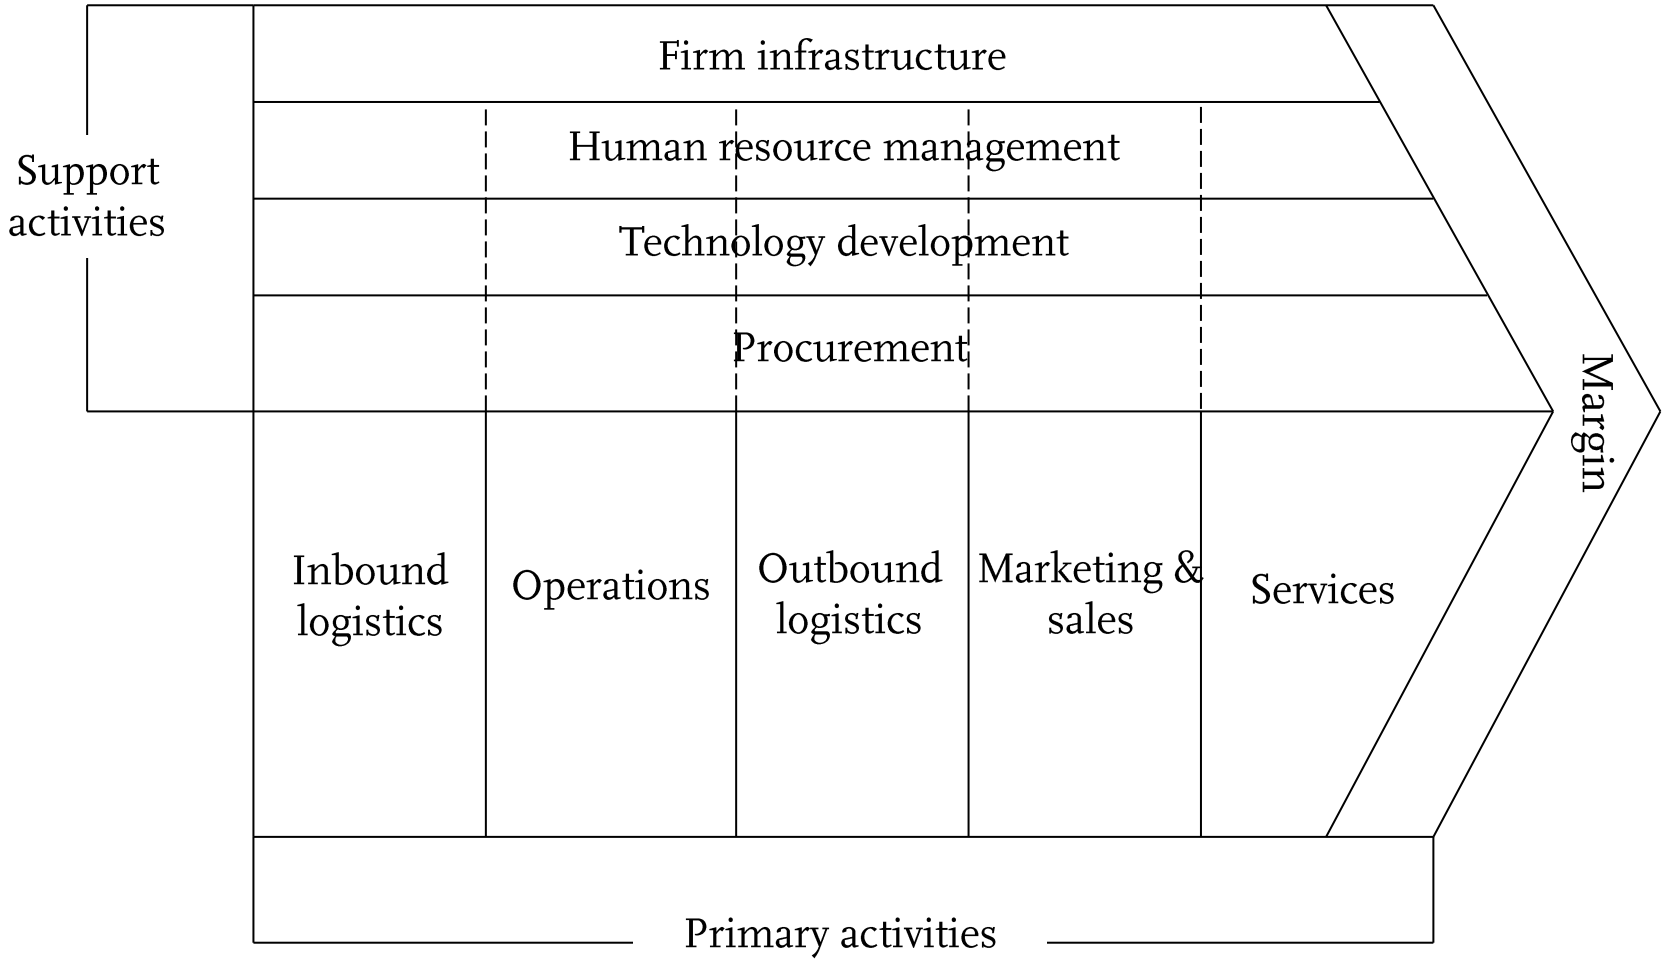

1. Where are we?
2. Where would we like to be?
3. How to get there?

Competitive advantage

Logistics management process

Achieving an integrated supply chain

The four pillars of supply chain excellence

Responsiveness : Time-based competition is now the norm. The focus is on agility.

Reliability : Unreliable processes create uncertainty and variability. Equally, lack of visibility adds to uncertainty.

Resilience : Today's turbulent and volatile markets require supply chains that are capable of dealing with the unexpected and the unplanned.

Relationships : As supply chains become more complex and as out-sourcing increases dependency on suppliers, the need for relationship management increases.
